

Test Plan Document

Online Shopping Application Testing — SauceDemo

Field	Details
Document Type	Software Test Plan
Project	SauceDemo E-Commerce Application Testing
Testing Approach	Manual Functional Testing
Application Under Test (AUT)	SauceDemo
Prepared By	Esha Israr
Test Level	System Testing
Test Type	Functional Testing
Testing Method	Manual Testing
Document Status	Completed

1. Introduction

1.1 Project Overview

This test plan defines the testing strategy, scope, objectives, environment, test activities, and deliverables for the manual functional testing of the SauceDemo e-commerce web application. The testing focuses on validating critical user workflows, including authentication, product browsing, product sorting, shopping cart operations, checkout, and logout functionality. The purpose of this testing activity is to identify functional defects, verify expected application behavior, and evaluate the reliability of the application's core shopping workflows.

2. Test Objective

The primary objectives are:

1. Verify that the application's core functionalities work according to expected behavior.
2. Validate login and authentication-related scenarios.
3. Verify product browsing and product information.
4. Validate product sorting functionality.
5. Verify shopping cart operations.
6. Validate the checkout workflow and input validation.
7. Verify logout and access-control behavior.
8. Identify, document, and classify defects.
9. Execute test cases and record actual results.
10. Perform regression testing where applicable.

3. Application Details

Item	Details
Application Name	SauceDemo
Application Type	Web-Based E-Commerce Application
Application URL	https://www.saucedemo.com/
Testing Type	Manual Functional Testing
Test Level	System Testing
Primary Browser	Google Chrome
Operating System	Windows 11

4. Testing Scope

4.1 In Scope

The following modules will be tested:

Login Module

- Valid login
- Invalid username
- Invalid password
- Empty username
- Empty password
- Locked user account
- Password masking
- Login button functionality
- Login using Enter key

Product Module

- Products page availability
- Product listing
- Product names
- Product prices
- Product images
- Product descriptions
- Add to Cart button availability
- Product details navigation
- Return to Products
- Product page accessibility after re-login

Sorting Module

- Name A–Z
- Name Z–A
- Price Low–High
- Price High–Low
- Sorting option availability

Shopping Cart Module

- Add product
- Cart count
- Multiple products
- Cart page
- Product information
- Remove product
- Empty cart
- Continue Shopping
- Cart persistence during navigation

Checkout Module

- Checkout access
- Valid customer information
- Required-field validation
- Order summary
- Order completion
- Order confirmation
- Cancel checkout
- Empty-cart checkout behavior

Logout Module

- Successful logout
- Protected-page access after logout
- Login after logout

4.2 Out of Scope

The following areas are outside the scope of this testing project:

Area	Reason
Payment gateway testing	No real payment processing is being evaluated

Database testing	Database implementation is not part of the testing scope
Performance/load testing	No performance test tools or load testing are being used
Security penetration testing	This project is focused on functional testing
Third-party integrations	External integrations are not being evaluated
API testing	API testing is maintained as a separate skill/project
Mobile application testing	The project focuses on the SauceDemo web application

5. Testing Approach

The project uses a **manual functional testing approach**.

Testing activities include:

1. Requirement and functionality analysis
2. Test scenario identification
3. Test case design
4. Test data preparation
5. Manual test execution
6. Expected vs. actual result comparison
7. Defect identification
8. Defect reporting
9. Retesting
10. Regression testing
11. Test execution reporting
12. Test summary preparation

5.1 Functional Testing

Functional testing will verify whether application features behave according to their expected functionality.

The following functional areas will be evaluated:

- Authentication
- Product browsing
- Product sorting
- Shopping cart
- Checkout
- Logout

5.2 Regression Testing

Regression testing will be performed when changes or defect fixes could affect previously tested functionality.

Regression testing will focus on critical workflows such as:

- Login
- Product selection
- Cart operations
- Checkout
- Logout

6. Test Design Techniques

This is something **missing from your original Test Plan**, and adding it makes your portfolio stronger.

The following test design techniques are used where applicable:

1. Equivalence Partitioning
2. Boundary Value Analysis
3. Error Guessing
4. State Transition Testing
5. Decision Table Testing
6. Positive Testing
7. Negative Testing

7. Test Environment

Component	Details
Operating System	Windows 11
Browser	Google Chrome
Browser Version	Record the version used during execution
Application	SauceDemo
Testing Method	Manual
Test Data	SauceDemo provided test accounts and test data

8. Entry Criteria

Testing can begin when:

1. SauceDemo is accessible.
2. The testing environment is available.
3. The testing scope has been defined.
4. Required test data is available.
5. Test cases have been prepared.
6. The tester understands the expected functionality.
7. The application is sufficiently stable for testing.

9. Exit Criteria

Testing can be considered complete when:

1. All planned test cases have been executed.
2. Test execution results have been documented.
3. Identified defects have been documented.
4. Critical workflows have been tested.
5. Failed test cases have corresponding defect information where applicable.
6. Test execution results have been reviewed.
7. A test summary report has been prepared.

10. Test Deliverables

The following documents and artifacts will be created:

1. Test Plan
2. Test Scenarios
3. Test Cases
4. Bug Reports
5. Test Execution Report
6. Test Summary Report
7. Test Evidence

11. Defect Management

Defects identified during testing will be documented with:

1. Defect ID
2. Title
3. Module
4. Environment
5. Description
6. Preconditions
7. Steps to Reproduce
8. Expected Result

9. Actual Result
10. Severity
11. Priority
12. Status
13. Evidence
14. Related Test Case

12. Risks and Mitigation

Risk	Impact	Mitigation
Application unavailable	Testing cannot proceed	Verify application availability before execution
Browser compatibility issues	Incorrect test results	Use a supported browser and record version
Test data unavailable	Test execution blocked	Prepare valid and invalid test data beforehand
Environment changes	Inconsistent results	Record environment details
Application behavior changes	Existing test cases may become outdated	Review and update test cases when required
Intermittent application behavior	Unreliable results	Reproduce failures and document evidence
Tester error	Incorrect test results	Review test cases and reproduce failures

13. Approval

Role	Name	Status
QA Tester	Esha Israr	Prepared
